

I support the ARRL comment concerning docket ET 03-104. I do not believe that there is any reason to support BPL. I see no conclusive evidence stating that this will not interfere with anyone wanting to make use of the frequencies from 2MHz through 80MHz whether he/she is using the frequency for work related use, hobby, or general short wave listening. I am a Amateur Radio Operator and would not like it if the FCC commissioners broke the very rule about causing interference on a public frequency that they govern.. I believe ET 03-104 should be put on hold forever. Thank you for reading this short note..
